Contact Name: Marina Gershon
Type of Building: Residence/Home
Designer/Builder: The Dacha Crew
Square Feet: Approx. 1250
Year Built: Under Construction

The Dacha Project is a collective of six people who are in the process of creating an environmentally sustainable home together. They aspire to be off the grid with the use of alternative building methods such as utilizing geothermal heat, earth berming and strawbale construction. They also plan to have a composting toilet, a vehicle as well as a generator powered by waste vegetable oil, radiant floor heating and other green features.
